

PCBSD - Feature #11527

allow multiple windows of a single app to be sent to a different workspace

Category:	Lumina Desktop		
Target version:			

Description

Currently (Lumina 0.8.7-devel): if an application has more than one window, then sending that app to a different space requires multiple sends (of individual windows).

It would be nice for a single action to send all windows of an app.

A relatively advanced implementation might have that action within a Mission Control-like interface.

A simpler implementation might involve the *grouping* Task Manager (all windows of an app as a single icon in a panel). Imagine a menu item, from that icon, to send all windows to a space.
