Description

When creating a user and setting a path to a home dir it isnt created. May adding an option to select a default location for all homedirs would be awsome. Also a message in the UI "Homedir doesn't exist, do you like to create it?"

Selecting the permission for this dir can be done via inherit from the dataset (if "home" is one).

For short, the same behaviour like "adduser" on [[FreeBSD]]-Generic

It should be working in 8.0.3+. What issues are you seeing?

#2 - 02/02/2012 06:15 PM - Christian -

- Status changed from Unscreened to Closed

The problem is that there was no obvious reason, nor i found a message in the logs. I verified several times that there are no spelling issue since i copy and paste the dir. After a reboot the problem still happen. After a third one it doesn't happened, this behavior was very strange. Sorry for bothering, it looks like thats the point where I should setup remote logging :)

#3 - 02/02/2012 06:25 PM - Anonymous

It's ok. So, ultimately the problem was that the error notification blipped by the screen and didn't inform you of a potential issue? If so, this is something that's annoyed several users (myself, another iX dev, someone in the marketing team, etc).

I'm going to open another ticket for that item.
