Target version: N/A	
Seen in: 9.10-STABLE-201605240427	Needs Merging: Yes
Severity: New	Needs Automation: No
Reason for Closing:	Support Suite Ticket: n/a
Reason for Blocked:	Hardware Configuration:
Needs QA: Yes	ChangeLog Required: No
Needs Doc: Yes	
Description	
<p>This was broken with my LDAP password fixes in 9.10 that were also backported to 9.3, this needs to be tested and and backported when i try to make an LDAP connection over SSL, i'm having an error which says "Can't contact LDAP server." . When i checked /var/log/debug.log, i'm seeing that SSL option was set to "off" like ;</p> <pre>[common.freenasldap:184] FreeNAS_LDAP_Directory.__init__: host = ldap.domain.com, port = 636, bind dn = , basedn = , ssl = off</pre>	
<p>No matter which encryption type i choose(TLS/SSL), it is always set to "off", i don't know if it's a bug or not. Then i tried to make a query from cli after i added the information to "/usr/local/etc/openldap/ldap.conf" and still no luck. The error i got when i use ldapsearch;</p> <pre>TLS trace: SSL3 alert write:fatal:handshake failure TLS trace: SSL_connect:error in error TLS trace: SSL_connect:error in error TLS: can't connect: error:14082174:SSL routines:ssl3_check_cert_and_algorithm:dh key too small .</pre>
