

PCBSD - Bug #16117

PC-BSD Network Manager fails to cease using custom DNS

06/27/2016 10:15 AM - Graham Perrin

Status:	Screened
Priority:	Important
Assignee:	Ken Moore
Category:	Network Manager
Target version:	
Seen in:	11.0-CURRENT
Description	
<ol style="list-style-type: none">1. enable custom gateway2. enable custom DNS, two entries3. use those two servers without difficulty4. shut down, start5. disable custom gateway6. disable custom DNS7. apply8. close PC-BSD Network Manager9. reopen PC-BSD Network Manager	
Expected:	
<ul style="list-style-type: none">• no custom DNS	
Actual result:	
<ul style="list-style-type: none">• custom DNS still enabled	
Workaround:	
<ul style="list-style-type: none">• restart the operating system.

Thanks for your report Graham. We'll have a look at this.

#2 - 06/29/2016 09:02 AM - Graham Perrin

Speeding through this ... if I recall correctly (from a few hours ago) another workaround may be:

- whilst the box for custom DNS is checked
- curse to the end of the address field
- backspace until all parts of the address are erased
- then clear the checkmark from the box.
