

PCBSD - Bug #16149

PC-BSD Network Manager custom gateway discrepancy

06/29/2016 09:00 AM - Graham Perrin

Status:	Screened
Priority:	Important
Assignee:	Ken Moore
Category:	Network Manager
Target version:	11.0-CURRENT
Seen in:	11.0-CURRENT

Description

For example, whilst the GUI shows

011.0.1.81

at the command line I see:

```
$ netstat -r
Routing tables
```

Internet:

Destination	Gateway	Flags	Netif	Expire
default	ln-mowifi-01-10.1.	UGS	wlan0	
10.1.8.0/21	link#3	U	wlan0	
ln-mowifi-01-10.1.	link#3	UHS	lo0	
localhost	link#2	UH	lo0	
193.62.168.0/24	link#1	U	em0	
193.62.168.101	link#1	UHS	lo0	

Internet6:

Destination	Gateway	Flags	Netif	Expire
::/96	localhost	UGRS	lo0	
localhost	link#2	UH	lo0	
::ffff:0.0.0.0/96	localhost	UGRS	lo0	
fe80::/10	localhost	UGRS	lo0	
fe80::%em0/64	link#1	U	em0	
fe80::5a20:b1ff:fe	link#1	UHS	lo0	
fe80::%lo0/64	link#2	U	lo0	
fe80::1%lo0	link#2	UHS	lo0	
fe80::%wlan0/64	link#3	U	wlan0	
fe80::9665:9cff:fe	link#3	UHS	lo0	
ff02::/16	localhost	UGRS	lo0	

```
$
```

History

#1 - 06/29/2016 12:39 PM - Joshua Smith

- Assignee set to Ken Moore
- Priority changed from No priority to Important
- Target version set to 11.0-CURRENT

#2 - 08/09/2016 05:59 AM - Kris Moore

- Status changed from Unscreened to Screened

Ken, fix parsing of default route on GUI when its a domain rather than IP
