Description

First off, I've found this issue in another ticket (<http://support.freenas.org/ticket/1652>), and says it's been fixed in a recent build; however I'm using 8.3.0-BETA2 and the problem still exists. Which build has fixed this issue?

Here's my info:

System Information

```
Hostname  FILES1.SANDUH
Build    FreeNAS-8.3.0-BETA2-x64 (r12317M)
Platform Intel(R) Core(TM)2 Duo CPU E7300 @ 2.66GHz
Memory   6127MB
System Time  Sun Sep 16 20:12:58 PDT 2012
Uptime    8:12PM up 16 mins, 0 users
Load Average  0.02, 0.08, 0.12
Connected through  10.10.1.20
```

It seems like changing permissions to volumes, datasets, and inside AFP file shares just isn't working?

History

Browsers cache the javascript used to generate the permissions widget. Try clearing your browser cache and trying it again. The fix is definitely in 8.3.0-BETA2.
