Description

The Console Setup Menu includes "The web user interface is at: <IPs>"

Because many users access the system with mDNS at "freenas.local" or a custom name, the only way to see the DHCP-assigned IP is via Shell: ifconfig

Knowing the IP and subnet is very useful when debugging.

Alternative: Show the DHCP-assigned IP under Network

Feel free to MFC to the "Old" UI.

Similarly, the Console Setup Menu (on the hardware console) should probably show the mDNS names such as "freenas.local".
