

FreeNAS - Bug #25737

Clarify replace disk instructions in Guide

08/31/2017 03:35 AM - Charles Elliott

Status: Resolved	
Priority: No priority	
Assignee: Warren Block	
Category: Documentation	
Target version: 11.1-BETA1	
Seen in: Unspecified	Needs Merging: Yes
Severity: New	Needs Automation: No
Reason for Closing:	Support Suite Ticket: n/a
Reason for Blocked:	Hardware Configuration:
Needs QA: No	ChangeLog Required: No
Needs Doc: Yes	
Description <p>I shut down the NAS to replace the disk to clean the CPU fan and the PSU airways, although the system has AHCI. Item 3 of the replace disk procedure says: "After the disk has been replaced and is showing as OFFLINE, ...". The replaced disk does not show OFFLINE; it shows "UNAVAIL." Moreover, it is no longer identified as adaNp2 (N in [0, 5]); it is identified by a very long radix 10 integer, which is not the gptid. One has to completely guess that this is the replaced disk.</p> <p>The last sentence of Item 3 says: "After clicking the Replace Disk button, the ZFS pool starts to resilver and the status of the resilver is displayed." That is a true statement, but the resilver status is never updated. The only way to tell if the resilver process is proceeding normally is to type "zpool status <pool>", preferably from PuTTY since OW one loses his place in the Guide. One can wait a long time to figure that out.</p>

Note that the first part is a bug that was resolved.

This sentence portion should still be removed from the Guide: "and the status of the resilver is displayed"

#6 - 10/17/2017 08:57 AM - Warren Block

- Status changed from *Unscreened* to *Screened*
