Description

Hello,

I'm running FreeNAS-11.0-U4 (54848d13b) [updated from 9.3] and until now I had the following directives in the "Auxiliary parameters" in FTP configuration:

```
TLSProtocol TLSv1
```

```
<Directory />  
HideFiles "(\\.cshrc|login|login_conf|mail_aliases|mailrc|profile|rhosts|shrc|windows)$"  
</Directory>
```

Now I wanted to edit these "Auxiliary parameters" and simply change "TLSProtocol TLSv1" to "TLSProtocol TLSv1.1 TLS1.2", however now it seems that the available space for writing anything in "Auxiliary parameters" is limited, so I can either have the TLS directives or the HideFiles directive - both will not fit. I thought: no problem, I'll add them directly to proftpd.conf, but they're deleted after each FTP service reboot.

Can the character limitation for the "Auxiliary parameters" field be increased or can I make the changes to proftpd.conf stick?
