Description		
I tried to install a manual update of FN 11.1-RC1 and it gave an error message (see Screenshot)

Update: When installing the tank to store the update file bit it doesn't work but when I choose the memory it does

- Status changed from Unscreened to 15

This looks like the permission error again, which -- as I recall -- is only an issue via the GUI.

If you apply the manual update from the CLI, does it still have the problem?
