

FreeNAS - Bug #28547

Home directory creation for users

Description Currently in the new UI we select the exact dataset that we want for the user to be created in, which is nice for power users as we create our own datasets. But for normal users, they would expect selecting "POOL/mnt/home" to likely create "POOL/mnt/home/USER" for them like the old UI used to. So I'm suggesting we revert behavior to creating a home directory of the user inside the specified dataset, unless one exists, then using that dataset as is, like the legacy UI.
