Description

Some jobs can produce log files: <https://redmine.ixsystems.com/issues/27968>

Job has logs_path field, it points to filesystem path where logs are stored.

It also has logs_excerpt field which contains first and last N lines from this file.

I suggest that there should be some reusable component that, given job ID, would display logs excerpt, allow log file download or even view it directly in the browser.
