#### Description

I've been having a number of odd display issues with the message log box in Chromium Version 29.0.1547.65 (220622) on PC-BSD 9.1. I have enclosed screenshots below. Basically, the window is tied to the right side of the screen. If you drag it right, it compresses slightly to a minimum width against the right side and then goes off the right side, but snaps back when you release the mouse. If you drag it left, it gets wider and wider (to about the width of the longest line in the log) while remaining tied to the right side. Dragging further left makes it detach from the right side, but it resets back to the right side after releasing the drag.

This is merely a display issue - as far as I can tell the actual information displayed is not impacted. I've observed this bug in many past versions of FreeNAS, though I can't be sure exactly when it started.

Word wrap the console messages

Ticket: #3205

#### History

##### #1 - 10/10/2013 08:57 PM - Josh Paetzel

- Assignee set to William Grzybowski

William, can you reproduce this on Chromium for another OS? This may be a PC-BSD issue.

##### #2 - 10/10/2013 09:11 PM - William Grzybowski

No, it seems to be working fine on my end.

Chromium 28 and PCBSD. Unless I did not understand the issue (dragging the dialog to the right).

##### #3 - 10/24/2013 08:13 PM - Jordan Hubbard

- Status changed from Unscreened to Closed: Cannot reproduce

- Assignee changed from William Grzybowski to Anonymous

BRB: We can't reproduce this one. Old version of Chrome?
