Description

iocage does not use VirtIO for networking, only VNET.

The main issue is the Jail Wizard offers VirtIO as the networking choice while creating a new jail when it should be VNET.

Found the Wizard issue while testing during userguide review.

Double checked/confirmed with Brandon.

Searched the Jail directories for any other mentions of VirtIO:

```
grep -iR VirtIO *
```

```
jail-add/jail-add.component.ts:      Dynamic Host Configuration Protocol. <b>VirtIO</b> \
jail-edit/jail-edit.component.ts:      Configuration Protocol enabled. <b>VirtIO</b> and \
jail-wizard/jail-wizard.component.ts:      Dynamic Host Configuration Protocol. <b>VirtIO</b> \
jail-wizard/jail-wizard.component.ts:      placeholder: T('VirtIO Virtual Networking'),
jail-wizard/jail-wizard.component.ts:      tooltip: T('Use VirtIO to emulate network devices for the \
jail-wizard/jail-wizard.component.ts:href="https://www.freebsd.org/cgi/man.cgi?query=virtio&manpath=FreeBSD+11.1-RELEASE+an

jail-wizard/jail-wizard.component.ts:      this.summary[T('VirtIO Virtual Networking')] = res ? T('Yes') : T('No');
```

```
jail-add fixed
jail-edit fixed
jail-wizard fixed
```

I think this is important enough to include in 11.2-Beta1
