<b>Description</b> When creating a new Cloud Sync Task using Remote encryption, if an Encryption salt is not provided, then an error will occur. The error is non-descriptive, simply "encryption_salt". If the field is necessary, then it should be labelled as such. If not, then this is a middleware bug.

I no longer get an error when not providing an encryption salt, but instead I get a separate error, 'args', regardless of whether I supply a salt. I will close this ticket and upload a related bug about the new error.
