

## FreeNAS - Bug #36658

### Sharing/iSCSI/Auth/Add: Peer Secret is treated as a mandatory field, but the UI says it is not

<b>Description</b>	
I'm testing a separate issue with iSCSI and zvols on a FreeNAS system with INTERNAL14/11.2-BETA1 installed.	
While setting up Authorized Access in the iSCSI Sharing area, the form says a Peer User and Peer Secret are only needed when configuring mutual CHAP and does not mark them as mandatory. Trying to save without anything entered in the Peer User and Peer Secret fields results in errors stating those fields are misconfigured.
