

FreeNAS - Bug #40440

Rollback VM creation if anything goes wrong to prevent duplicate VMs

08/02/2018 01:22 AM - Chris Burge

Status: Done	
Priority: No priority	
Assignee: William Grzybowski	
Category: Middleware	
Target version: 11.2-BETA3	
Seen in: 11.2-BETA2	Needs Merging: No
Severity: Medium	Needs Automation: No
Reason for Closing:	Support Suite Ticket: n/a
Reason for Blocked:	Hardware Configuration: FreeNAS running under kvm/qemu test environment which supports nested virtualisation.
Needs QA: No	ChangeLog Required: No
Needs Doc: No	
Description	
Problem: The new Vm wizard picks a zvol size of 10GiB for a linux VM. An error is generated at step 7 re: usage of more than 80% of space. Using the back buttons to return to step 4 and manually reducing the zvol size allows the VM to be created. But two Vms of the same name are generated. One with just a NIC device and one with the expected four devices (NIC, VNC, CD_ROM & DISK)	
Steps to re-create: See series of screen caps attached.
