Description

VMs -> Options (3dots) on an existing bhyve VM -> Devices -> Disk Options (3dots) -> Edit

The Disk sector size is set to VOLUME

see Device-Edit-Disk-SectorSize-2018-08-02.png

The tooltip is: Enter the sector size in bytes. The default 0 leaves the sector size unset.

There is no mention of what VOLUME means

VOLUME would seem to imply that the sector size is inherited from the volume the zvol was created on.

If that is the case should this instead say POOL as all references to volume were changed to pool in the webui.
