Gerry: please attach a screenshot that shows the 2 paths you typed into the UI screen to generate that error message.

- File deleted (*debug-freenas-20180820185536.txz*)

##### #6 - 08/21/2018 07:56 AM - Dru Lavigne

- *Subject* changed from Cannot add storage to jails: [EINVAL] destination: Destination should not include the jail path. e.g "/mnt/iocage/jails/btsync/root/" Path should be specified after / to Use browse folders for jail mount points
- *Target version* changed from Backlog to 11.2-RC2

Gerry: does using /emby\_2/root/bin work?

Erin: to avoid the user having to guess the correct path from the error message we should really provide a browse button that only lets them select a valid source or destination.

No. This only gives /mnt/iocage/jails/emby\_2/root/emby\_2/root/bin. Seems that some magic adds /mnt/iocage/jails/emby\_2/root/ automatically, meaning that "bin" workes.  
So this is all confusing, as the docs are not clear enough nor the error message.

Browsing does not help either, as the browseable path below /mnt/iocage/jails/emby\_2/root/ gives the error while saving. Furthermore, I cannot browse to a nonexisting path like /mnt/iocage/jails/emby\_2/root/media/CDs.

I ended up by setting "CDs" as the destination manually, see screenshot. How this nonexisting directory is going to be created is still a mystery to me. Maybe that's the reason why my jail / plugin is now not starting any more. I even cannot delete this mount point... No error message given.

The only way getting rid of those not-deletable mount points is to delete the whole plugin / jail. Reinstalling the emby plugin gives now a rather strange error, see screenshot.
