Description	
It would be nice to have middlewared log in the local timezone that is set in the webUI. It would help ease confusion with time differences when trying to compare the different log files (eg /var/log/middlewared.log, /var/log/debug.log, /var/log/messages)

Configure timezone correctly

This commit makes sure that we configure timezone correctly in Middlewared when the system boots as this resulted in Middlewared still using UTC for it's actions even after the boot is complete.
