

FreeNAS - Bug #74569

iocage jails stop when detaching an unrelated pool

02/09/2019 09:27 PM - Kevin Horton

Status: Done	
Priority: No priority	
Assignee: Brandon Schneider	
Category: Middleware	
Target version: Master - FreeNAS Nightlies	
Seen in: 11.2-RELEASE-U1	Needs Merging: No
Severity: New	Needs Automation: No
Reason for Closing:	Support Suite Ticket: n/a
Reason for Blocked:	Hardware Configuration:
Needs QA: No	ChangeLog Required: No
Needs Doc: No	
Description	
<p>On my system, running FN-11.2-RELEASE-U1, all iocage jails stop when I detach a pool. iocage is using the main pool, which is not the pool I am detaching when this occurs. I see nothing in messages when iocage stops.</p> <p>All pools that are detached are backups (created either by replicating recursive periodic snapshots of the root dataset, or by using rsync), which also have a copy of the iocage dataset, so that is possibly implicated in this apparent bug.</p> <p>Another possible implicated issue: when I first activated iocage, I did an "iocage activate" without specifying the pool, and iocage activated on the first pool when sorted alphabetically, which was not the desired pool. I did "iocage clean -a; iocage activate <pool>" to sort this out, but perhaps some cruft was left behind that is now trigger a bug.</p>
